Wow!

## Fishermen Class celebrated British Science Week!

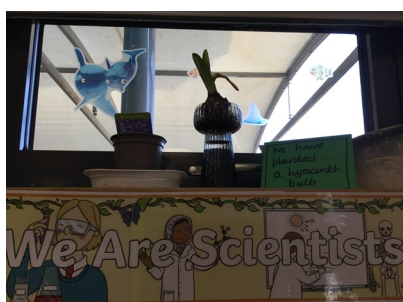

The children had an exciting assembly from Atomic Tom. They learnt how to create a water tornado and explored properties of air. They also learnt how to make 'elephants' toothpaste' and watched as Atomic Tom created connections with air and liquids.

The children loved their workshop with Atomic Tom where they explored connections through a taste test, listening to their heart beats and looking at the connections in a heart through a live dissection!

The children had great fun exploring 'connections' through the study of growth and change in plants. The children compared seeds and bulbs and planted some of their own. They are now studying the growth of the plants through their science unit this term. The children are also observing the growth and change of the frog spawn which appeared in class this week!
