Wow!

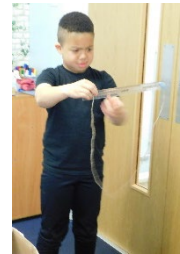

Carpenters Class celebrated

British Science Week!

The children had an exciting assembly from Atomic Tom. They learnt how our bodies change and develop as we grow older. We tested our lungs capacity and whether it changes as we grow. We also made many connections such as 'your heart is as big as your fist'.

The children loved their workshop with Atomic Tom where they created time pendulums and completed time challenges to show how we change as we grow.

The children had great fun exploring time and studying the human body. The children looked at how different sized particles travel through the respiratory system.

The children also completed the first lesson on Microbits. The children used an algorithm to programme the Microbit to complete a series of timed tasks. The children worked together in house groups for the Science Week Quiz! Well done St Joseph for coming first! The visit from Joel Fearon was exciting and inspirational for many.

Best dressed in Carpenters class!
