Identifying Plants: French Beans

WOW!

We started today's lesson by learning that plants make seeds and that they need sunlight, water and air to grow.

We then planted our own Climbing French Bean seed in a clear plastic bag so that we can observe it as it changes.

What did we do?

1. Wet the tissue
2. Place it inside the plastic bag
3. Add the seed.
4. Tape the bag to the window in the sun.
5. Observe the changes
