

Wow!

Making a volcanic eruption.

In Fishermen Class as part of our extreme earth topic we learnt about the structure of a volcano and then conducted an experiment where we used different chemicals to mimic a volcanic eruption.

Experiment 1:

The best results! A very high explosion!

2 Bicarbonate of soda spoonful's

3 Tartaric Acid spoonful's

130 mls of warm water with a couple of drops of washing up liquid.

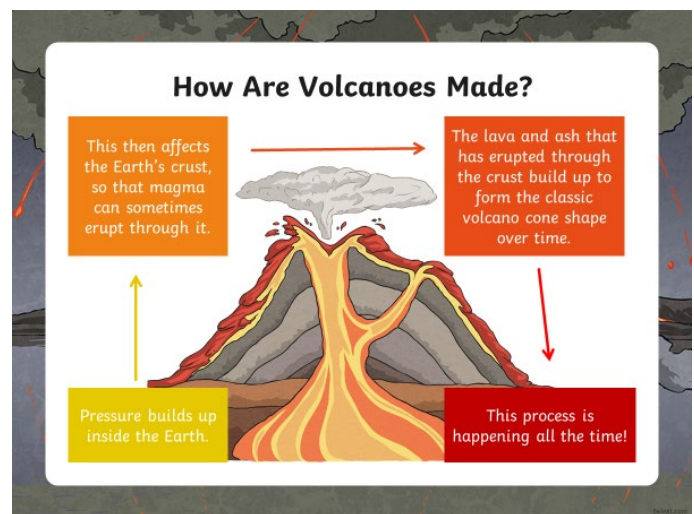

Experiment 2:

2 Bicarbonate of soda spoonful's

3 Tartaric Acid spoonful's

130 mls of vinegar.

We learnt the names of each layer.

Wow! An amazing result from experiment number two.
