Wow!

Farmers Class have built a space rocket!

Farmers Class were given the challenge to design and build a space rocket for 'Zag'. First they looked at different rockets to find out about the parts they would need.

The children found out that they would need a main body, cone nose, two fins, a window and some boosters!

The children worked in teams to make each part of the rocket using recycled materials. Team 1 made the rocket boosters.

Team 2 painted the main body of the rocket.

Next the children worked together to finish the painting and decorate the rocket.

After that the children followed instructions to make the cone nose.

Then they wrote their own instructions to explain how to make a cone nose.

Finally the children put the rocket together to show 'Zag'.

What fantastic team work Farmers Class!
