Science shared
lesson with parents

Wow!

Farmers Class have made ocean scenes!

Farmers Class had a wonderful shared lesson with their parents.

The children talked confidently about what they had learnt in their science lessons this term.

The children followed a criteria list to make sure they had a variety of ocean animals in their underwater scene.

They could explain why **ocean animals** have **gills** and **fins**.
They could also identify which ocean animals don't have a **backbone**.

In science the children have been able to **sort, classify, name, label and describe** ocean animals.

What fantastic work Farmers Class!
