Identifying Plants: Greenhouses

WOW!

In Farmers we have been growing lots of different as part of our Identifying Plants unit in sci- been growing sunflowers and coleus in in the classroom. The sunflowers have over the last 2 weeks, and today potted outside.

The children prepared the pots with compost before ing their plants across into new pots. We then watered them and made sure that they were positioned in the sunlight to make sure they continue growing. They then took the opportunity to water the potatoes, carrots and individual sunflowers that we have planted outside.

Watch this space for an update on the coleus and the cress and French beans that are still growing inside.
